Date of birth: 26/12/1998 | **Phone number:** (+40) 722612693 (Mobile) | **Email address:** ionutopriaofficial@gmail.com | **Website:** <https://opriaionut.com> | **Website:** <https://www.linkedin.com/in/ionut-opria-6164b5150/> | **Address:** Brasov, Romania (Home)

ABOUT ME

Hello, I am a versatile **Game Developer** with **6 years** of experience in building games and interactive applications. Throughout my career I worked on a diverse range of projects, which allowed me to amass a wide range of skills, such as: **engine**, **graphics** and **gameplay** programming, **web** development using **Three.js & Typescript**, **Unity & Unreal Engine** development for games, **AR-VR** and **mobile** development.

WORK EXPERIENCE

TECHNICAL ARTIST – PARADOX CAT – 11/08/2025 – Current – BRASOV, ROMANIA

- Developed and optimized specialized real-time shaders in a proprietary engine for automotive visualization of upcoming vehicles.
- Collaborated closely with a leading global automotive manufacturer, focusing on delivering highly performant rendering solutions while maintaining visual fidelity and scalability.

GAME DEVELOPER – NEOMORPH STUDIO SRL – 28/04/2020 – 31/01/2025 – BRASOV, ROMANIA

- Lead the development of 6 mobile games** for Android and iOS, ensuring the successful launch of each title. I was responsible for managing timelines, creating & estimating tasks in a small coordinated team. Personally **developed 4 of the 6 games** from start to finish and set up professional development practices. The games reached over **4,000 users** and the client expressed deep satisfaction with the results.
- Created **procedural content** in the **browser** using advanced rendering techniques and shaders. Successfully created an engine that can **generate unique planets** in the browser, developed complex **procedural terrain** algorithms and contributed to a **web-based game**.
- Built immersive **VR & AR** applications for the **Oculus Quest 2 & 3** for a multitude of clients. The projects were mainly focused on helping the clients train their personnel in a safe simulated environment.
- Contributed to a **custom game-engine** developed from scratch in **C++**. I was a **Tool & Graphics** developer and implemented various features that leveled up the engine and simplified the workflow for the people using it.

PROJECTS

17/05/2025 – 09/06/2025

Blades and Beggars

Core technologies: Unity, C#

Game that I built together with 3 other people in Unity. I had the role of **gameplay programmer** and implemented various features, such as: player controls, enemy AI, boss behavior, integrating art assets and deploying to the web.

12/08/2024 – 31/01/2025

HEIDI Chocolate Games

Core technologies: Unity, C#, AR, SQL, DigitalOcean, Blender

I was the **programming lead** on this project and ensured the successful launch of **6 mobile games** across 2 campaigns for the chocolate company HEIDI. I was responsible for planning tasks, organizing the timeline and milestones for the project, **developed independently 4 of the 6 games**, set up the backend, set up art pipelines, optimized & profiled the app for it's successful launch. The games reached over **4,000 users** and the client expressed deep satisfaction with the result.

Link <https://play.google.com/store/apps/details?id=com.HeidiChocolat.HeidiChocolate>

Core technologies: C++, OpenGL, Sokol, ImGui, JavaScript, TypeScript, Node.js, WebPack, Three.js, Pixi.js, WebGL, GLSL, Colyseus, HTML5, CSS, Python, SQL, Spine 2D

I contributed to multiple development phases and had different roles throughout the projects, such as: **engine, gameplay & graphics programmer, tool developer, technical artist.**

- My main achievements & contributions:
- Developed a **3D engine** that is able to generate a near-infinite amount of **procedural planets** in the **browser**, and generated **9,000 unique planets** using this engine
 - Developed core gameplay mechanics for a web-based game
 - Worked on a **procedural volumetric terrain** algorithm with cave systems
 - Developed multiple tools in a **C++ custom game-engine**, such as: asset bundling algorithms, shader compiler which can hot-swap shaders at runtime, developed texture & sounds APIs, 2D spine animations

31/12/2023 – 31/03/2024
Jorogumo's Cradle

Core technologies: Unreal Engine 5, Blueprints, Blender

Short first-person horror game that I built on my own in **Unreal Engine 5** using Blueprints and released on Steam.

● **EDUCATION AND TRAINING**

01/08/2018 – 25/06/2021 Brasov, Romania
BACHELOR OF COMPUTER SCIENCE Transilvania University of Brasov

Acquired IT skills across Data Structures, Android Development, Image Processing, Graphics Programming, SQL and AI

● **LANGUAGE SKILLS**

Mother tongue(s): **ROMANIAN**
Other language(s):

	UNDERSTANDING		SPEAKING		WRITING
	Listening	Reading	Spoken production	Spoken interaction	
ENGLISH	C2	C2	C1	C1	C1

Levels: A1 and A2: Basic user; B1 and B2: Independent user; C1 and C2: Proficient user

● **SKILLS**

Soft Skills

Communication | Teamwork | Problem-Solving | Adaptability | Time Management | Empathy | Critical Thinking | Attention to Detail | Curiosity | Agile | Proactive

Hard Skills

Unity | Unity DOTS | Unreal Engine | C# | C++ | Three.js | TypeScript | JavaScript | Node.js | Blender | Substance Painter | 3D modelling | ECS | Design Patterns | SOLID Principles | OOP | Multithreading | OpenGL | WebGL | GLSL | VR & AR | Python | SQL | HTML5 | CSS | Debugging & Profiling | Game Optimizations | Graphics Programming | Shader Development | Procedural Generation | Git
